#### **Velocity:**

Imagine we have a 10-day sprint duration, and the velocity of the team is 20 (points per sprint). Let's calculate the team's average velocity (AV) per iteration unit (story points per day)

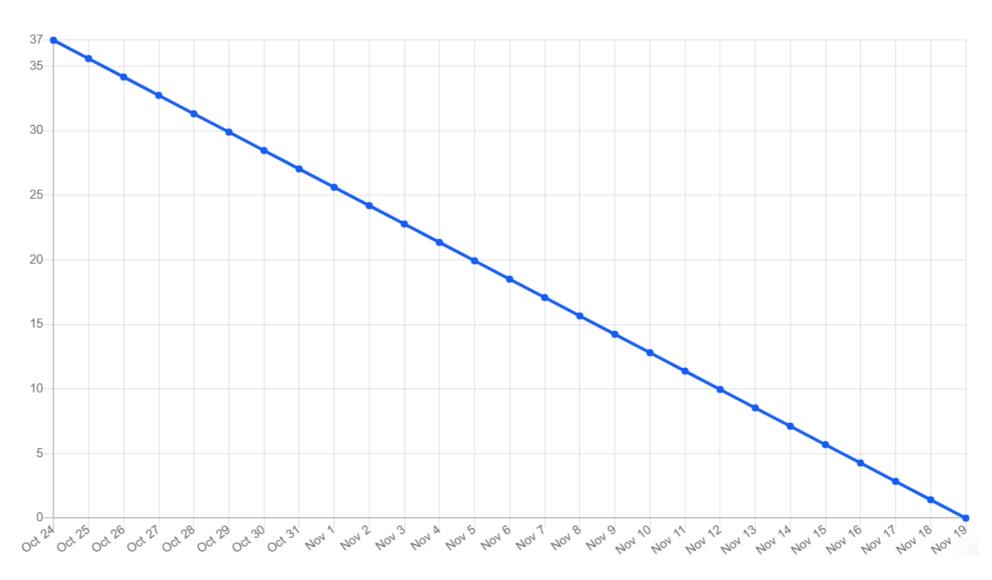

$$AV = \frac{sprint\ duration}{velocity} = \frac{20}{10} = 2$$

| Sprint   | Story points | Duration | Average velocity |
|----------|--------------|----------|------------------|
| Sprint-1 | 5            | 6        | 0.83             |
| Sprint-2 | 8            | 6        | 1.33             |
| Sprint-3 | 8            | 6        | 1.33             |
| Sprint-4 | 16           | 6        | 2.66             |
| Total    | 37           | 24       | 1.54             |
